

Product Design Change Notification
Labelmaster Item: OBEXMC-1LT

November 29, 2018

Attention: Customers that have purchased Labelmaster Obexion item OBEXMC-1LT, the 1-laptop or tablet package

Effective immediately, the vent hole and brass grommet with non-woven carbon fiber patch on the top lid will be removed from the OBEXMC-1LT product. This design change affects only the external carton. All other components of the item will remain the same. The new design will be identified as OBEXMCNG-1LT and will replace the OBEXMC-1LT item.

Analysis of lithium ion battery-powered device burn testing with OBEXMC-1LT showed minimal venting of smoke and gases through the vent hole and brass grommet on the top lid unless all seams were taped shut. Since the product closure instructions specify the use of only two (2) four-inch strips of tape applied to the corners of the package to secure the cherry lock tabs, this condition does not apply in actual commercial use. Burn testing laptops and tablets in the product without a vent hole and grommet demonstrated no degradation in mitigation of thermal runaway hazards. Based on these test results, the vent hole and grommet will be removed from OBEXMC-1LT as an unnecessary feature.
