Attn: 128 oz. Natural HDPE Square Handled Bottle (KP28RR) Customers

As an ISO 9001:2015 certified company we adhere closely to a Quality Management System. As part of our system, you are receiving this letter to inform you that the manufacturer of our 128 oz. natural HDPE square handled bottles (Labelmaster item: KP28RR) has qualified an alternate resin supplier. The bottles are primarily manufactured with Bapylene 2035 but may also use Certene HPB-0354 due to resin shortages. Both resins are FDA-approved high density polyethylene copolymers that fall under the same specification requirements and have the same quality and processing capabilities. The KP28RR bottle is included in our UN128PPSPAK6, UNC128PSPAK6, UA128PPS and UAC128PS kits.

If you have any questions or would like to review the resin specifications, please contact me directly. If you order these bottles or kits for someone else, please forward this notification.

Sincerely,

Bill Barger, Senior Packaging Product Manager
